

Exam Setup:

The steps in this section are to be completed before you begin with Question 1 of the exam.

1. Click arrow next to the **Training-firstname-lastname** (root) folder.
2. Choose New Folder and name it **Certifications**.

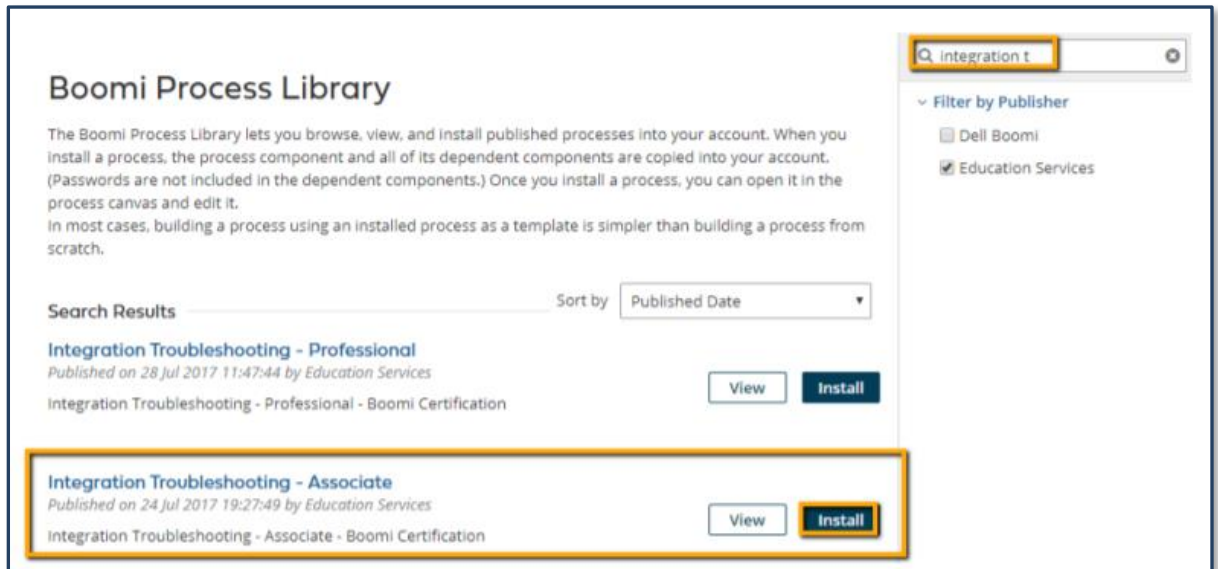

3. In the **Certifications** folder create a new sub-folder and name it **Associate Developer Practical**.

Associate Developer Certification - Practical Application

- Click Browse Process Library. Check **Education Services** under Filter by Publisher and enter **Integration T** as the filter.

- Click **Install** next to Integration Troubleshooting - Associate.
- Click **Choose...** next to Select Installation Location and navigate to the **Associate Developer Practical** folder.
- Click **Install** in the lower right corner.
- The process is now installed in your account. Click View Process.

Associate Developer Certification - Practical Application

The Associate Developer Troubleshooting Section is constructed for you to troubleshoot a live AtomSphere Process. The exam consists of multiple choice questions that you will answer as you troubleshoot. The questions include a series of steps to follow as you actively test the Process, review Documents and fix bugs. This process queries account data stored remotely and generates files saved to the Test Atom Cloud work directory.
